RELEVANT PROJECTS

Note: For the Source code of these projects, click on the title of each project, and it will redirect you to the source code.

[Storefront \(Back-end\)](#)

- This is a backend for an e-commerce application built with Django and Django Rest framework. It provides the necessary RESTful APIs with compressive documentation and database models to manage an online store.

[Opportunities Board \(Full-stack\)](#)

- An Opportunities Board that allows ALU students and staff to share new opportunities they come across from their network. It has Google authentication, which allows only ALU students to access it.

[Airbnb Clone \(Back-end\)](#)

- Replica of how the backend of AirBnB might look built from scratch. It has a RESTful API that serves as an interface for the basic functionality of Airbnb, such as adding users, houses in a city, managing amenities, etc. It provides an administrative console to interact with this functionality and manage the database.
